

Attention: Residents of Harbour Vista

Re: Upcoming exterior termite treatments on the community

We will be on-site starting on May 28th, 2019 thru June 3rd, 2019 treating the building's exteriors for termites. Our crews will be accessing several locations of the structures exterior however you will not need to do any type of interior preparations or vacate during this service. This service does not require access into the interiors of the units. Our treatment crews will however be accessing many portions of the building's exterior. We will be working primarily along the building's rooflines and exterior lumber.

The state approved termiticide being used to treat the termites is an odorless liquid called Termidor SC which is injected directly into the wood. Should you request additional information on the product Termidor SC, the material data safety sheet and product label you can contact the bugman's offices directly.

The bugmans technicians will be uniformed and in the blue company bugman trucks. Should you have any questions or comments please give a call to our offices or contact the on-site leasing office.
